## Summary

---

- Full stack software developer eager to apply problem-solving techniques learned. Practiced teamwork and made day to day task assignments as techlead on three projects consisting of at least two peers.
- 3.5 years work experience as a hardware developer at Oracle.
- 3 month work experience as a frontend software engineer at Genista Biosciences.

## Technical Skills

---

- Languages: JavaScript, TypeScript, HTML, CSS, Java, Python, Verilog, System Verilog
- Tools: Node.js, Express.js, React.js, Angular, MySQL, MongoDB, Handlebars.js, REST APIs
- Soft Skills: teamwork, communication, problem-solving, project management

## Experience

---

### Genista Biosciences, San Jose, California - Software engineer

Nov 2021 - Present

- Independently maintain the frontend of a React website to manage customer data
- Maintain the frontend of a Angular website with team to manage lab data
- Optimize structure and function to increase performance and user experience

### Oracle, Santa Clara, California - Hardware developer

May 2013 - Oct 2016

- Pre-silicon verification and Post-silicon Validation of Siete (SPARC M8)
- Build VMM testbench blocks to verify RTL design of SPARC Core
- Create test plan, write checker for the Coherence & Ordering Unit (COU) interfaces
- Develop and apply stimulus to exercise COU basic operations; Set up and maintain regressions
- Write COU interfaces checker and measure the progress with functional coverage and VCS Coverage Metrics (VCM)
- Inject errors and check the report with Fault Management Architecture (FMA) in post-silicon validation
- Test RAS of Data Analytics Accelerator (DAX) and L3 cache in post-silicon validation

## Projects

---

### Space Escape: Model-View-Controller (MVC) application of a story based game

Sep 2021

- 🌐 <https://github.com/qtian13/space-escape> ▶ <https://space-escape.herokuapp.com/>
- Build MySQL database with Sequelize
- Developed backend API routes for data CRUD
- Implement mini game Asteroids: Player controls the ship to avoid or hit moving asteroids
- Implement mini game Gold Collection: Player controls character to collect golds generated randomly
- Used: JavaScript, Node.js, Express.js, MySQL, Sequelize, React.js, CSS, REST APIs, JWT (Jason Web Tokens), Howler.js, Chart.js, Heroku

### CLOVE: MVC application of an online groceries market

Aug 2021

- 🌐 <https://github.com/qtian13/CLOVE> ▶ <https://still-reef-24172.herokuapp.com/>
- Build MySQL database with Sequelize
- Build features for user to search products, send messages and rate other users
- Build profile page for displaying user's picture, products for sale and other information
- Create RESTful API routes and HTML routes for data CRUD and apply Session Storage to check user's authentication
- Used: JavaScript, Node.js, Express.js, MySQL, Sequelize, Handlebars/HTML, CSS, REST APIs, Heroku, Cloudinary.js

## Education

---

### University of California, Berkeley, CA

- Coding Boot Camp Certificate: Full stack web development

Jun 2021 - Sep 2021

Average academic: A+

### University of Michigan, Ann Arbor, Michigan

- Master of Electrical Engineering: major in VLSI (very large-scale integration)

Aug 2011 - May 2013

GPA: 3.75/4.3
